**PROCESS FOR PRODUCING PELLET OF ETHYLENE/VINYL ALCOHOL
COPOLYMER**

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- Group I, claim(s) 1-16, drawn to a process for producing a pellet of EVOH copolymer.
- Group II, claim(s) 17-25, drawn to a process for producing EVOH copolymer resin.

2. The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features. The common technical feature in all groups is an EVOH copolymer solution containing 50 parts by weight or more of alcohol having a boiling point of 100°C or less with respect to 100 parts by weight of an EVOH copolymer, contacting the solution with water in said apparatus to let out said alcohol with water and then letting out from said apparatus an EVOH copolymer hydrous composition, containing 0 to 10 parts by weight of said alcohol and 10 to 1000 parts by weight of water with respect to 100 parts by weight of the EVOH copolymer.

3. The element cannot be a special technical feature under PCT Rule 13.2 because the element is shown in the prior art. Kawahara et al. (EP 1179546 A1) provides an aqueous

ethylene-vinyl alcohol copolymer (EVOH) composition that ensures efficient removal of alcohol not worsening the environment in and around working areas(see Abstract). Also provided are EVOH pellets of the aqueous composition, which can be produced stably and can be washed rapidly (see Abstract). The production method comprises introducing an EVOH solution that contains at least 50 parts by weight, relative to 100 parts by weight of EVOH therein, of an alcohol having a boiling point of not higher than 100 DEG C, into a vessel, and contacting it with water vapor in the vessel, thereby letting the alcohol out along with water vapor and taking the resulting aqueous EVOH composition that contains from 0 to 10 parts by weight of the alcohol and from 10 to 500 parts by weight of water, relative to 100 parts by weight of EVOH therein, out of the vessel (see Abstract). The EVOH pellets are obtained by cutting the aqueous EVOH composition obtained in the production method (see Abstract).

4. **Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.**

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher S. Nichols whose telephone number is (571) 270-3969.
